Chapter 09 - Optimizing our App

- When and why do we need lazy() ?
- What is suspense ?
- Why we got this error : A component suspended while responding to synchronous input. This will cause the UI to be replaced with a loading indicator. To fix , updates that suspend should be wrapped with startTransition ? How does suspense fix this error ?
- Advantages and Disadvantages of using this code splitting pattern ?
- When do we and why do we need suspense ?

Coding :-

- Create your custom Hooks
- Try out lazy and suspense
- Make your code clean
